AMENDMENTS TO THE CLAIMS:

Docket No : IVGN 819

Please amend the claims as follows:

 (Currently amended) A method of isolating nucleic acid and protein from each other in a sample, said method comprising contacting said sample with a plurality of solid supports.

wherein nucleic acid <u>components contained in said sample become bound to the solid support in a sequence independent manner</u> and protein components contained in said sample become bound to the solid supports <u>having a surface capable of effecting a chromatographic</u> interaction

wherein the solid supports to which nucleic acids components are bound are distinct from the solid supports to which protein components are bound.

- (Original) The method of claim 1, wherein both DNA and RNA are bound to the same solid support.
- (Original) The method of claim 1, wherein DNA and RNA are bound to distinct solid supports.
- (Original) The method of claim 3, wherein DNA and RNA are bound to different solid supports in separate steps.
- (Original) The method of claim 1, wherein RNA and protein, or DNA and protein, or DNA, RNA and protein are isolated from the same sample.
 - 6. (Original) The method of claim 5, wherein said RNA is mRNA.
 - 7. (Previously presented) The method of claim 5, wherein said DNA is genomic.
- (Previously presented) The method of claim 1, wherein the total RNA and/or the total DNA is isolated.
- (Previously presented) The method of claim 1, wherein the total nucleic acid component is isolated.

2 of 11

Marie Bosnes Docket No : IVGN 819 Serial No. 10/501.162

10. (Previously presented) The method of claim 1, wherein the total protein

component is isolated.

(Previously presented) The method of claim 1, wherein said sample is a food or 11.

allied product, or is a clinical, environmental or biological sample.

12. (Previously presented) The method of claim 1, wherein prior to contacting said

sample with said solid supports, the sample is subjected to a preliminary treatment step to free

the nucleic acid and/or protein components from structures or entities in which they may be

contained.

13. (Previously presented) The method of claim 1, wherein prior to contacting said

sample with said solid supports, the sample is subjected to a cell isolation procedure.

14. (Original) The method of claim 13, wherein one or more particular cell

populations are specifically isolated.

15. (Previously presented) The method of claim 1, wherein the sample, or a cell

population isolated therefrom, is subjected to a cell lysis step prior to contacting said sample

(Original) The method of claim 15, wherein cell surface proteins of cells within or isolated from said sample are subjected to an in vitro modification procedure prior to the cell

lysis step.

17. (Previously presented) The method of claim 1, wherein the sample is not divided

at any stage of the method.

with said solid supports.

18. (Previously presented) The method of claim 1, wherein the sample is divided

after cell isolation and/or lysis or after said preliminary treatment step.

19. (Previously presented) The method of claim 1, wherein said sample is contacted

with said solid supports sequentially or simultaneously or in parallel.

Serial No. 10/501.162

(Original) The method of claim 19, wherein in a first step DNA is isolated from said sample, in a second step RNA is isolated from said sample and in a third step, protein is isolated from said sample, and wherein said steps may be performed in any order.

- 21. (Previously presented) The method of claim 1, wherein DNA is isolated on a support carrying surface carboxyl groups.
- 22. (Previously presented) The method of claim 1, wherein DNA is isolated by binding to a solid support, in the presence of a detergent.
- 23. (Previously presented) The method claim 13, wherein cell lysis and nucleic acid or DNA binding to a solid support occur simultaneously or concomitantly.
- 24. (Previously presented) The method of claim 1, wherein RNA is isolated using an RNA-specified capture-probe carried by or attached to, or capable of binding to said solid support.
- 25. (Original) The method of claim 24, wherein said capture probe is or comprises of dT oligonucleotide or dU oligonucleotide.

26-27. (Canceled)

- (Previously presented) The method of claim 1, wherein said solid supports 28. comprise particles.
 - 29. (Original) The method of claim 28, wherein said particles are magnetic particles.
- 30 (Withdrawn) A kit for isolating nucleic acid and protein from the same sample comprising:
 - (a) a solid support suitable for binding nucleic acid components;
- (b) a solid support suitable for binding proteins, wherein said supports of a) and b) are distinct solid supports.

Marie Bosnes Docket No.: IVGN 819 Serial No. 10/501,162

31. (Withdrawn) The kit of claim 30, wherein the solid support of (a) comprises a support which is selective for binding DNA or RNA or both types of nucleic acid.

- 32. (Withdrawn) The kit of claim 30, wherein the kit also comprises (c) a solid support suitable for isolation of a specific cell population and/or (d) means for lysing said cells, and/or (e) a means for detecting the nucleic acid and/or protein.
 - (Canceled)
